

## **Dave Flynn**

Dave Flynn is a senior environmental engineer in the Kitchener, Ontario, office, and is the Practice Center Managing Leader for Environmental Remediation in Southwestern Ontario. He has more than 15 years of consulting experience in the environmental remediation field, including Phase I and II environmental site assessments, remedial options evaluation, remedial program design and implementation, contaminant hydrogeology, and risk assessments. He has managed the assessment and remediation of brownfield sites in Ontario and Alberta, including former rail facilities, foundries and fueling facilities. On behalf of the Ontario Home Builders' Association and BILD, Dave recently led a review of the impact of proposed changes in brownfields legislation on the development industry in Ontario. Dave received his B.Sc. in civil engineering from Queen's University in 1991, and completed his M.A.Sc. in civil engineering at the University of Waterloo in 1994.
